Art Unit: 3733

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claims 5 and 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear what structure Applicants are trying to claim by "mutually facing limits of the limits of the surfaces of half rotation to one another." The Examiner is interpreting the limitation to mean that the upper cover plate has convex and conical portions. Appropriate correction and/or clarification is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 3-5 and 12 are rejected under 35 U.S.C. 102(e) as being anticipated by Kelly et al. (US 2004/0054411A1).

Kelly et al. disclose an intervertebral prosthesis including upper and lower coverplates (20, 30) and a prosthesis core 40 wherein upper cover plate 20 has a top face that is conical in sagittal section (Figs. 3A/3B, and 7A and para [0037]).

Application/Control Number: 10/768,713

Art Unit: 3733

Claims 16-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Kelly et al. (US 2004/0054411A1).

Kelly et al. disclose an embodiment wherein the upper cover plate is convex in sagittal section and edge tangents can be drawn to enclose an angle not greater than 90 degrees (Fig. 2 and para [0036]).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kelly et al. (US 2004/0054411 A1) in view of Bryan et al. (US 2002/0035400 A1).

Kelly et al. disclose the upper cover plate to be conical in shape (Figs. 3A/3B and 7).

Kelly et al. disclose all elements of the claimed invention except for the specific shape.

Bryan et al. teach changing the shape of plates of an implant to achieve different mechanical results (para [0076]).

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have changed the shape of the Kelly et al. prosthesis, to achieve different mechanical results. Regarding the limitations, "lies between a circle contour with a radius of curvature of not more than 25 mm and an acute-angled contour with an apex angle of not more than 90 degrees, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have shaped the prosthesis of the combination of Kelly et al. and Bryan et al. with the claimed contours, since it has been held that where the general conditions of a claim are disclosed in the

Art Unit: 3733

prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105 USPQ 233.

Response to Arguments

Applicant's arguments submitted under "REMARKS" in the response filed on March 6, 2006 have been fully considered but are most in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anu Ramana whose telephone number is (571) 272-4718. The examiner can normally be reached Monday through Friday between 8:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eduardo Robert can be reached at (571) 272-4719. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
